

# DIY BEARD KIT\*

You too can look just like a bearded write-ist!

Ever thought to yourself, "I wish I had more facial hair!"? well, here's the answer to your prayers!

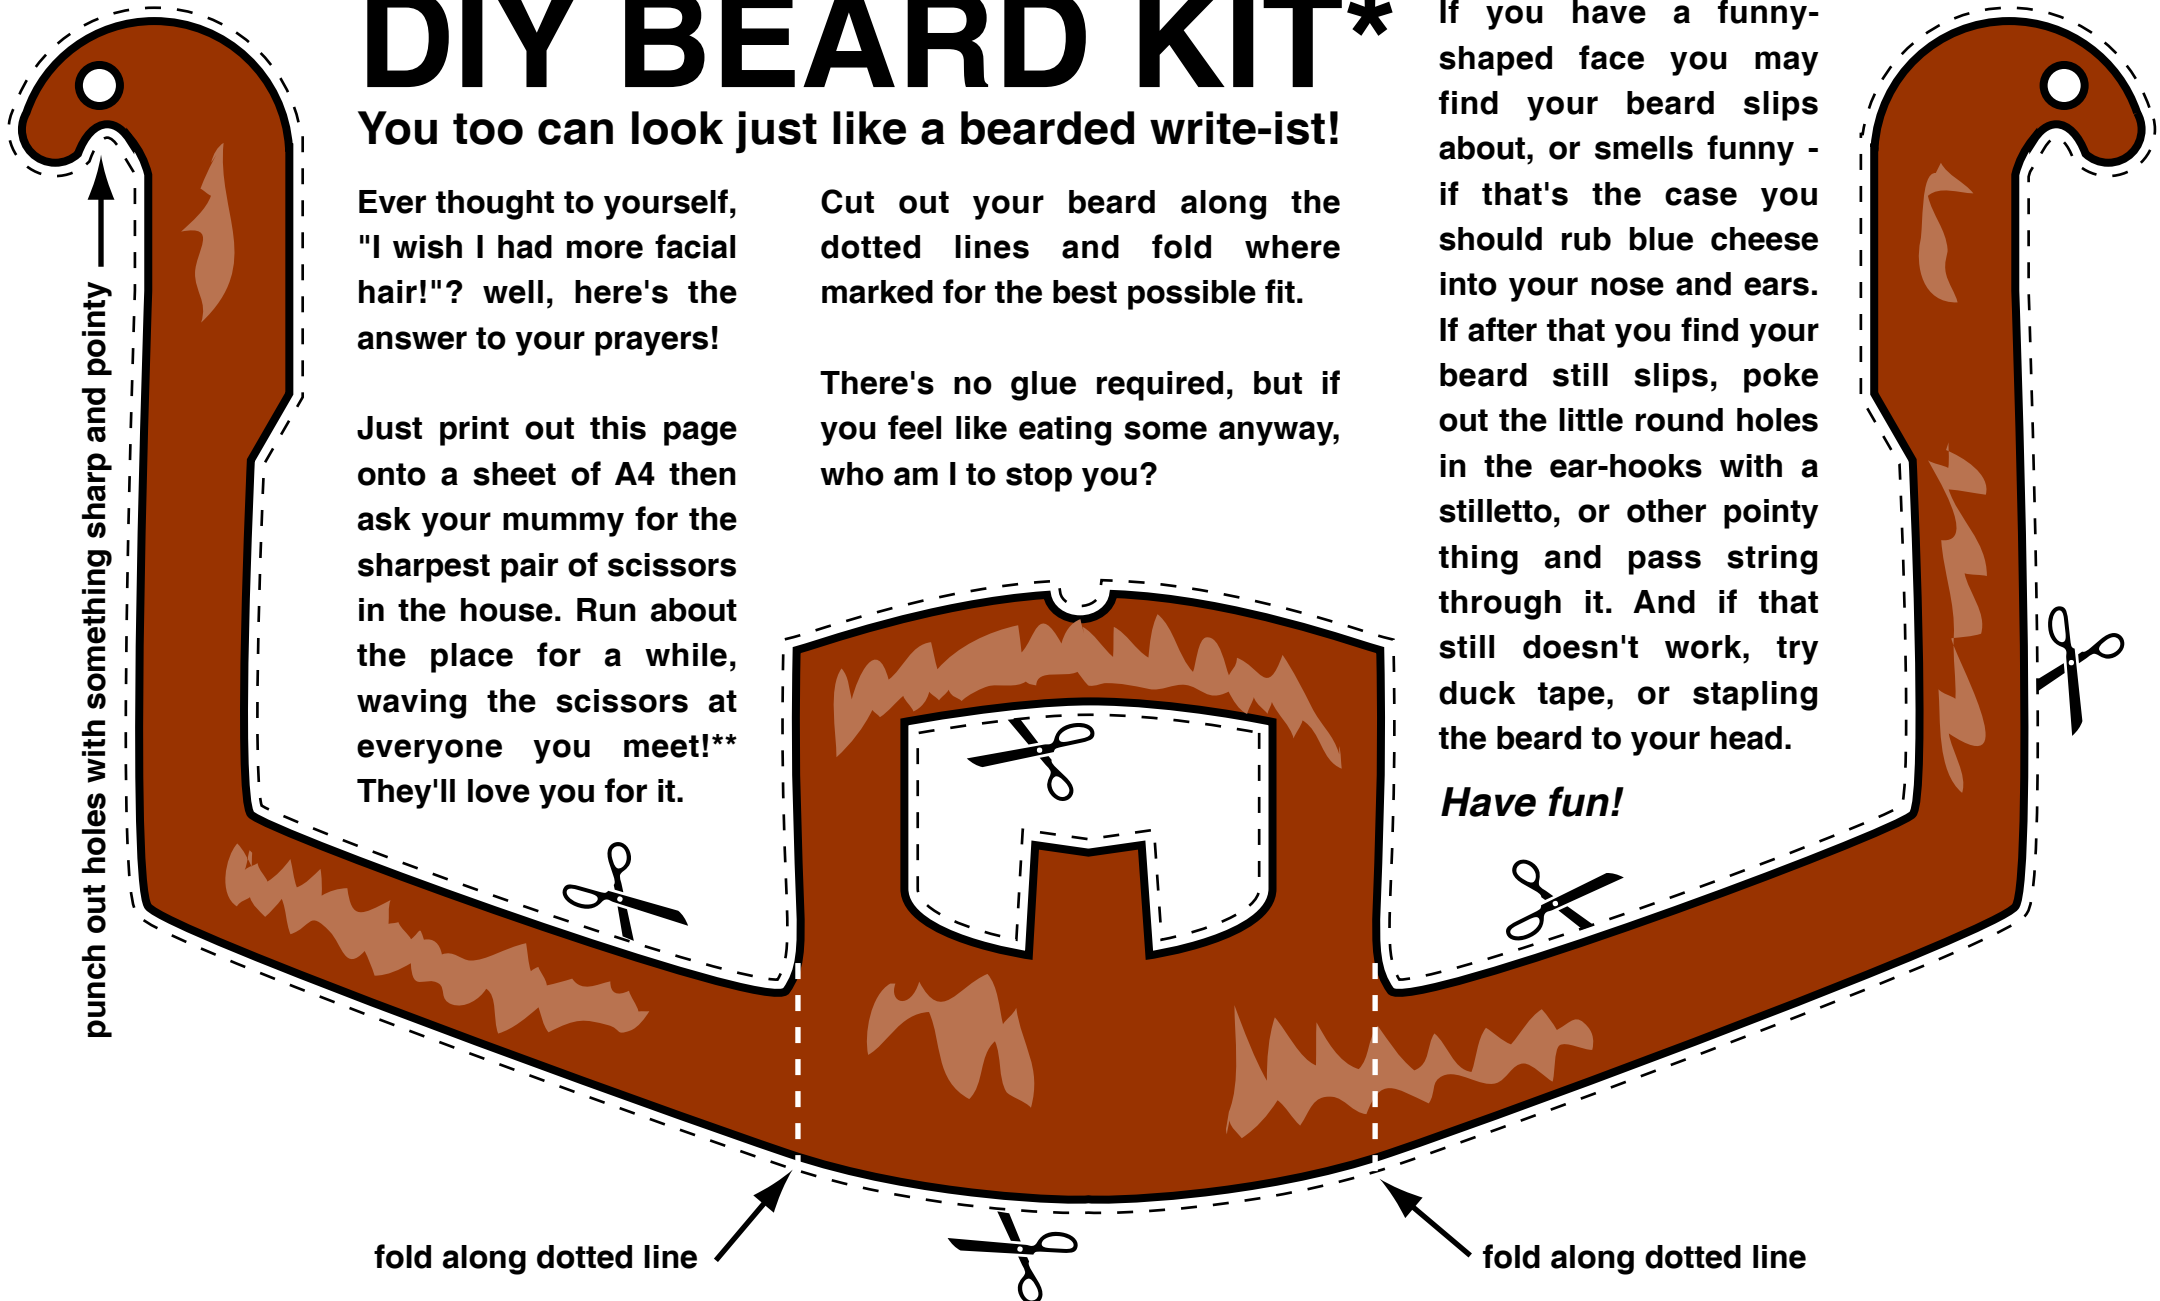

Just print out this page onto a sheet of A4 then ask your mummy for the sharpest pair of scissors in the house. Run about the place for a while, waving the scissors at everyone you meet!\*\* They'll love you for it.

Cut out your beard along the dotted lines and fold where marked for the best possible fit.

There's no glue required, but if you feel like eating some anyway, who am I to stop you?

If you have a funny-shaped face you may find your beard slips about, or smells funny - if that's the case you should rub blue cheese into your nose and ears. If after that you find your beard still slips, poke out the little round holes in the ear-hooks with a stiletto, or other pointy thing and pass string through it. And if that still doesn't work, try duck tape, or stapling the beard to your head.

*Have fun!*

\*WARNING - 1: may cause severe paper cuts to nose, ears, cheeks and face

\*\*WARNING - 2: running with scissors is very, very naughty and can lead to serious injury and nose warts.
